Sequence Search....thank you

Please do a standard and interference sequence search for:

(1) SEQ ID NO:78 (2) DNA's that encode SEQ ID NO:78

EXAMINER # 78896 DATE:8/8/2003

SERIAL NUMBER:09/921992

MAIL BOX ROOM: CM1 9E12 OFFICE ROOM # CM1 9D06

RESULTS FORMAT: PAPER

THANKS...Stuart

Stuart F. Baum Ph.D Art Unit 1638 CM1 9D06 (703) 305-6997 stuart.baum@uspto.gov

Vo	luntary Results Feedback Form
>	I am an examiner in Workgroup: Example: 1610
>	Relevant prior art found, search results used as follows:
	☐ 102 rejection
	☐ 103 rejection
	☐ Cited as being of interest.
	☐ Helped examiner better understand the invention.
	Helped examiner better understand the state of the art in their technology.
	Types of relevant prior art found:
4	☐ Foreign Patent(s)
	Non-Patent Literature
<i>K</i>	(journal articles, conference proceedings, new product announcements etc.)
	Relevant prior art not found:
	Results verified the lack of relevant prior art (helped determine patentability).
	Results were not useful in determining patentability or understanding the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention describes all novel method for incorporating gcpE and yfgB genes into viruses and cells for increasing isopremoid content and cidentifying e.g. antimicrobial agents, comprises using DNA sequences (I) identifying e.g. antimicrobial agents, comprises using DNA sequences (I) crom the gcpE or yfgB genes of bacteria or parasites or DNA sequences (II) which hybridize to the specified genes or encode a plastid protein with the same biological activity as those encoded by the genes. The convention also describes (A) plant cells containing (I) or (II); (2) plant cells containing (I) or (II); (2) crossing compounds (A) that have antimycotic, antiparasitic or antiviral activity in humans or animals or antiviral, antiparasitic, fungicidal or herbicidal activity in plants. (I) and (II) care used: (1) to increase the isopremoid levels in viruses and cells: (2) and (iii) to identify compounds that inhibit activity of gcpE, i.e. gotential antibacterial, antimycotic, antiparasitic or antiviral agents for agriculture.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

The invention relates to gcpE nucleic acid molecule, an essential gene confinethyl-D-erythritol phosphate (MEP) pathway) that encodes rice, arabidopsis thaliana or Escherichia coli GCPE protein. gcpE is useful CC canola, castor bean, coconut, cotton, crambe, linseed, maize, mustard, coli palm, peanut, rapeseed, rice, safflower, sosphan, sunflower, cc or wheat with an increased isoprenoid (tocopherol) compound level. The CC expression of GCPE protein in organisms increases the level of cc expression of GCPE protein in organisms increases the level of cc expression of GCPE protein in organisms overexpressing GCPE CC diphosphate biosynthesis. Transgenic organisms overexpressing GCPE CC protein can nutritionally enhance food and feed sources. Overexpression of GCPE protein in transgenic plant may provide tolerance to stresses CC e.g., oxidative stress tolerance such as to oxygen or ozone, UV tolerance, etc. gcpE may be used to obtain nucleic acid molecules from CC the same species, and to obtain nucleic acid homologues. gcpE is also used to ransfection. gcpE an also act as markers capable of CC detecting polymorphisms such as single nucleotide polymorphisms (SNPs). gcpE is also used to determine the level or pattern of expression of the protein. The present sequence is Escherichia coli GCPE protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      gcpE nucleic acid which is an essential gene of the methyl-D-erythritol phosphate pathway, encoding a fully defined GCPE protein which is useful for increasing levels of tocopherol substrates in plants -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      06-AUG-2001;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                            monocytogenes and related organisms, and for studying genetic polymorphisms and other genomes. The present sequence is a protein encoded by the genome sequence of the present invention. Proteins expressed from the genome sequence are useful for raising specific antibodies, identification of L. monocytogenes and related organisms, an for blosynthesis and biodegradation, especially biosynthesis of Vitamin B12. The genome sequence and proteins encoded by it are also useful for selecting compounds that regulate gene expression and cell replication and modulate L. monocytogenes-related diseases. In addition, the genome sequence and proteins encoded by it are discussed to the genome sequence and proteins encoded by it are useful in pharmaceutical and
                                                                                                                                                                                                                                                                             The present invention relates to the genome sequence of Listeria monocytogenes EGD-e (see ABAO3041). The genome sequence and fragrit are useful for selecting probes and primers for detecting genomonocytogenes and related organisms, and for studying genetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI;
                                               Note: The sequence data for this patent did not specification, but was obtained in electronic
                                                                                 vaccines compositions for the treatment or prevention monocytogenes and related organisms.
                                                                                                                                                                                                                                                                                                                                                                    Claim
                                                                                                                                                                                                                                                                                                                                                                                                               Genomic sequence for Listeria monocytogenes, useful e.g. for treatment and prevention of Listeria and related bacterial infections, and

The polypeptides can be used for preventing or treating Helicobacter infections, and gastroducdenal diseases associated with these infections, including acute, chronic, and atrophic gastritis, and peptic ulcer diseases, e.g. gastric and duodenal ulcers. They can also be used for the production of antibodies. The products can also be used for detection and diagnosis.

                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                             Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     c P. acnes. The disorders include SAPHO syndrome (synovitis, acne, C pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. C P. acnes is also involved in infections of bone, joints and the central centrous system, however it is particularly involved in the inflammatory c lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention c and determining the amount of bound protein in the sample. The c polypeptides may be used as antigens in the production of antibodies c specific for P. acnes proteins. These antibodies can be used to c downregulate expression and activity of P. acnes polypeptides and c therefore treat P. acnes infections. The antibodies may also be used as c diagnostic agents for determining P. acnes presence, for example, by c enzyme linked immunosorbent assay (ELISA).

                                                                                                                                                                        The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                16-DEC-1999;

                                          This invention relates to a method for identifying a nucleotide or polypeptide sequence that may be a drug target, or essential for growth or viability of an organism. Polynucleotide sequences AAH51947 - AAH52092 represent DNA encoding proteins AAG81096 - AAG81241, Mycobacterium tuberculosis proteins which are potential drug targets. The DNA and protein sequences are used to illustrate the method of the invention. The method involves providing an unknown nucleotide or polypeptide sequences, and comparing it to a number of sequences along with at least one algorithm capable of analysing a functional relationship between nucleotide and polypeptide sequences. The method is useful for characterising the function of nucleic acids and polypeptides that may be useful as a target for a drug or essential for the growth or viability of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Drug
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Mycobacterium

(I) are encoded by genes (II) whose expression is induced or up-regulated during culture of a mycobacterium under conditions defined by a dissolved oxygen tension of at least 10% air saturation measured at 37 plus degrees Celsius, when compared with a dissolved oxygen tension of at least 40% air saturation measured at 37 plus degrees Celsius. (I) and (II) have antibacterial, tuberculostatic and immunostimulant activities, and can be used in vaccines and gene

Also disclosed are the nucleic acid molecules encoding the proteins an antibodies that specifically bind to the proteins. The composition comprising the protein, nucleic acid or antibody is useful for the manufacture of a medicament for treating or preventing N. gonorrhoeae infection, this may be in the form of a vaccine or gene therapy. Sequences given in records ABP76736-ABP81046 represent nucleic acid molecules of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAY36754-Y37949 are encoded by open reading frames (ORFS) of the genome of Chlamydia trachomatis (see AAZ01425). The polypeptides can be used as vaccines against Chlamydia trachomatis. Antisense and ribozyme sequences can also be used to control growth of the microorganism. Chlamydia trachomatis is responsible for a large number of diseases, e.g. eye diseases such as conventional trachoma, nonendemic trachoma, paratrachoma, and inclusion conjunctivitis; genital diseases such as perihepatitis, bartholinitis; pneumopathy in breast feeding infants; penithepatitis, bartholinitis; pneumopathy in breast feeding infants; and veneraal lymphogranulomatosis. disease, sarcoidosis, sinusitis, purulent otitis media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see AAY34584-Y35879) can be used immunogenic compositions as vaccines. Vectors containing C. pneumonia nucleotides sequences can also be used as immunogenic compositions, especially where the vector directs the expression of a neutralising

                                                                                                                                                                                            of methyl-D-crythritol phosphate (MEP) pathway) that encodes rice, Arabidopsis thaliana or Escherichia coll GCPE protein gcpE is useful for producing a transgenic plant such as Brassica campestris, B. napus, canola, castor bean, coconut, cotton, crambe, linseed, maize, mustard, oil palm, peanut, rapeseed, rice, safflower, sesame, soybean, sunflower, or wheat with an increased isoprenoid (tocopherol) compound level. The expression of GCPE protein in organisms increases the level of tocopherol substrate such as isopentyl diphosphate and dimethylallyl diphosphate biosynthesis. Transgenic organisms overexpressing GCPE protein can nutritionally enhance food and feed sources. Overexpression
                                          the same species, and to obtain nucleic acid homologues. gcpE is also used as or primers. The recombinant vectors are used in plant transformation or transfection. gcpE an also act as markers capable of detecting polymorphisms such as single nucleotide polymorphisms (SNPs). gcpE is also used to determine the level or pattern of expression of the protein. The present sequence is Arabidopsis thaliana GCPE protein.
                                                                                                                                         of GCPE protein in transgenic plant may provide tolerance to stresses e.g., oxidative stress tolerance such as to oxygen or ozone, UV tolerance, etc. gcpE may be used to obtain nucleic acid molecules from
                                                                                                                                                                                                                                                                                                                                                                                                                                gcpE nucleic acid which is an essential gene of the methyl-D-erythritol
phosphate pathway, encoding a fully defined GCPE protein which is
useful for increasing levels of tocopherol substrates in plants -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WPI;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Best Local Similarity
                   This invention describes a novel method for incorporating gcpE and yfgB genes into viruses and cells for increasing isoprenoid content and identifying e.g. antimicrobial agents, comprises using DNA sequences (I) from the gcpE or yfgB genes of bacteria or parasites or DNA sequences (II) which hybridize to the specified genes or encode a plastid protein with the same biological activity as those encoded by the genes. The invention also describes (I) plant cells containing (I) or (II); (2) transformed plant cells, and transgenic plants regenerated from them, that contain (I) or (II); (3) determining the enzymatic activity of a gcpE protein; or (4) screening compounds (A) that have antimycotic, antiparasitic or antiviral activity in humans or animals or antiviral.
                                                                                                                                                                                                                                                                                                                                                                                                                                                    Incorporating gcpE and yfgB genes into viruses and cells, for increasing isoprenoid content and identifying e.g. antimicrobial agents, comprises using DNA sequences from bacteria or parasites

The proteins described include 1-deoxy-D-xylulose-5-phosphate reductoisomerase, 1-deoxy-D-xylulose-5-phosphate synthase and the gcpE protein. The products of the invention have antimycotic, antibiotic, antiviral, antiparasitic, antimicrobial, bactericide, fungicide and herbicide activity. The encoding nucleic acid sequences of the invention are used for prevention or treatment of diseases in humans and animals are used for prevention or treatment of diseases in humans and animals
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    antimicrobials, antiparasitic agents, antivirals, fungicides, bactericides and herbicides, for use in human or veterinary medicine or agriculture). This sequence represents the Plasmodium falciparum gcpE protein described in the method of the invention.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                            105.5
